

By visiting another Nordic gynecological oncologic center you might get good ideas for changing your working life and you may bring good ideas to the center you visit! By visiting each other in the NSGO member countries we also might facilitate the research environment between our centers and might open doors for our young colleagues and their expert education as claimed by the ESGO organization.

The NSGO department questionnaire has been mailed twice to the relevant contact persons. Beneath you can see the results from the departments having answered the questionnaire in the spring/summer 2016.

The remaining Nordic departments are urgently invited to complete the questionnaire!

If you don't have the questionnaire you can get it by sending me an email on the address: jab@dadlnet.dk and I will return the questionnaire to you!

By exchanging a surgeon between a center from e.g. Norway with a surgeon from a Swedish center, we can do it with no expenses for the individual center as each center continue to pay the salary for their own surgeon. Of course, you will have some travel expenses but because most surgeons are also members of each national Gynecological Society, and thus, members of NFOG they are entitled to get funding from NFOG to facilitate clinic visits between Nordic countries.

The exchange is important to be sure that each single department don't have to miss a surgeon but that the exchange will guarantee a substitution at each center during the exchange period!

Please use the survey to choose the center YOU want to visit! Make contact and find a colleague who wants to visit you center!

Profile of the gynecological oncological department – frame 1

Hospital Country	Yearly number of Ovarian cancer	Cervical cancer	Endometrial cancer	Vulvar cancer	Weekly number of surgery: Ovarian cancer	Cervical cancer	Endometrial cancer	Vulvar cancer	Specialties in the department Cancer surgery	Chemotherapy	Radiation therapy
