

Molecular Tumor Boards Current Practise, Future Needs

Jeffrey Yachnin

Center for Clinical Cancer Studies Karolinska University Hospital

Oncology Molecular Tumor Boards at Karolinska

- Weekly MTB within the Cancer Core Europe Consortium
 - Our own MTB Q 2 weekly at Karolinska
 - Nordic MTB Q monthly

Label drug

use

Off-label drug use

Matching to a clinical trial

Treatments to Avoid

Karolinska Comprehensive Cancer Center

Germline discovery

Changing diagnosis

4 essential questions to ask at an MTB

Is there good validity and robustness of the analytic method?

Is the variant pathogenic?

Is the variant actionable?

Is it clinically relevant?

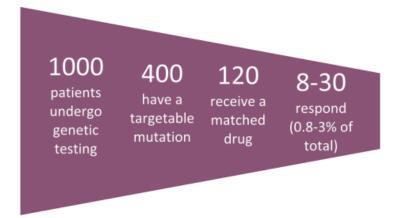

How often is this approach successful?

HOWEVER: UNTIL NOW, NO CONVINCING BENEFIT FROM LARGE SCALE TUMOUR AGNOSTIC STUDIES

11 trials, including more than 13,000 patients
Various gene panels (including 49-87 genes) and tissue microarrays

Tannock IF & Hickman JA, Ann Oncol 2019, 30(5): 661-663

Karolinska Comprehensive Cancer Center

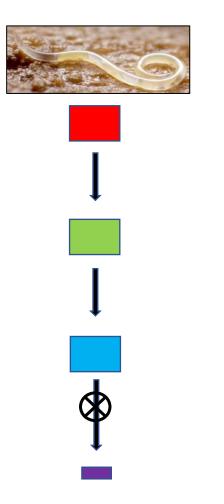

2025-01-10

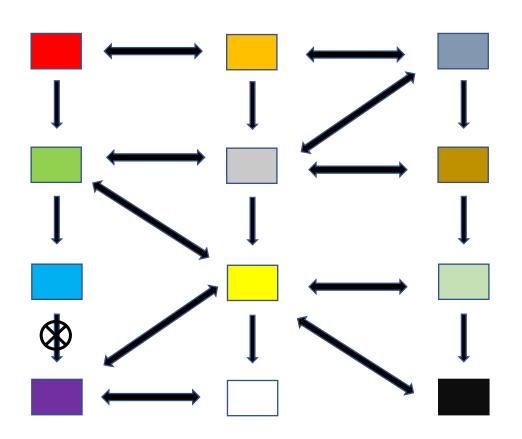

Some things to think about......

- Do we know if our drug is reaching the target?
- What level of target engagement is required to see pharmacodynamic impact?
 - Is the target a cancer driver?
 - Are there other variants present that may impact our results?

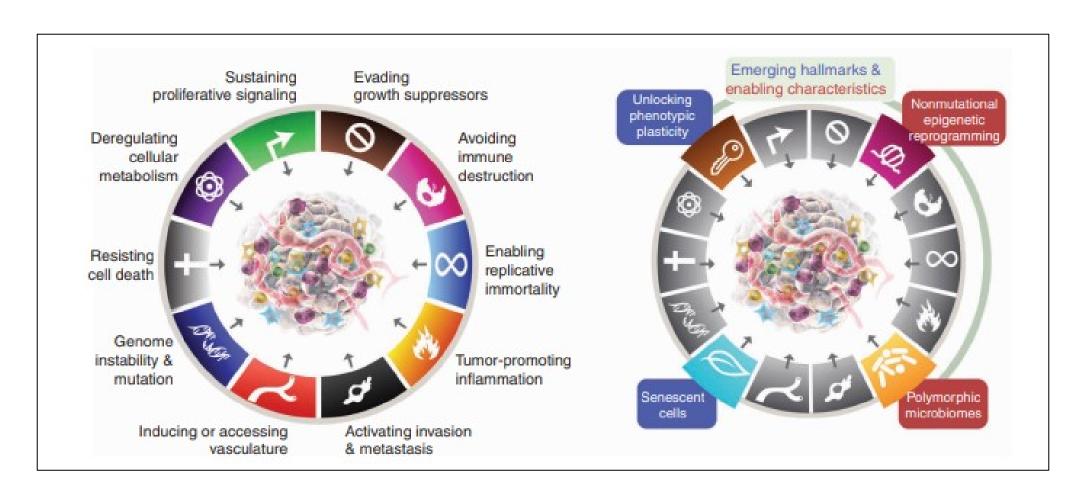

.....if only it was so simple!

The future.....?

not simply adding more layers of information

Check for updates

OPEN Identification of gene signature

for treatment respo precision oncology i renal cell carcinoma
